

5 Common Ways to Hide Element – CSS

```
.element {  
  display: none;  
}
```

Display

The element completely disappears.
And it does not take up any space on
the web page.

```
.element {  
  visibility: hidden;  
}
```

Visibility

The element gets visually hidden.

And it takes space on the web page.

```
.element {  
  clip-path: circle(0);  
}
```

Clip Path

It will completely hide the element.

And it takes space on the web page.

```
.element {  
  transform: scale(0);  
}
```

Transform

It decreases the size of an element.

And it takes space on the web page.

```
.element {  
  opacity: 0;  
}
```

Opacity

The element will be fully transparent.

And it takes space on the web page.
