5 HTML TRICKS
NOBODY TELLS YOU

1.Spellcheck

The spellcheck is used to check the spelling and grammar of Html elements such as input.

```html
<input spellcheck="true" placeholder="Enter Anything"></input>
```
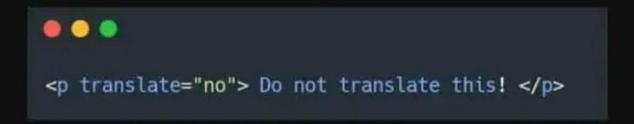

2. Translate
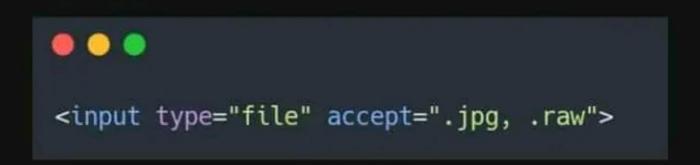

The translate attribute is used to tell the browser whether the content is to be translated or not.

It can be translated into any language.

```html
<p translate="no"> Do not translate this! </p>
```
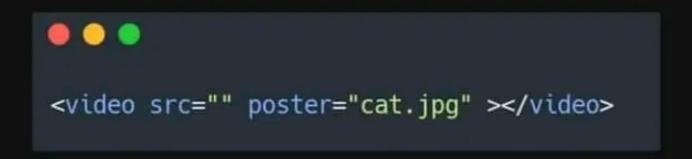

3. Accept

The accept attribute is used to specify the type of files the user can upload. In the below example, the user can upload or use only .jpg or .raw files.

```html
<input type="file" accept=".jpg, .raw">
```

4. Poster

The poster attribute specifies an image to be shown while the video is downloading, or until the user hits the play button.

If this is not included, the first frame of the video will be used instead.

```
<video src="" poster="cat.jpg" ></video>
```

5. Download

The download attribute specifies that the target (the file specified in the href attribute) will be downloaded when a user clicks on the hyperlink.

```html
<a href="" download></a>
```
